## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-27 are allowed.

### *Reasons for Allowance*

2. The following is an examiner's statement of reasons for allowance:

**Claims 1-20** identify the uniquely distinct limitation "an audio-data output section for continuously playing audio data of at least one music piece identified from music pieces recorded in the disk and different from at least some of the music pieces whose video data is played back, upon receipt of the search signal, wherein the played audio data is played back during the playback of video data of a least one music piece for which the played audio data is not recorded on the disk as corresponding audio data, and the played audio data is not as frequently changed over as the played video data during a search operation."

**Claims 21-27** identify the uniquely distinct limitation "continuously playing audio data of at least one music piece identified from music pieces recorded in the disk and different from at least some of the music pieces whose video data is played back, upon receipt of the search signal, wherein the played audio data is played back during the playback of video data of at least one music piece for which the played audio data is not recorded on the disk as corresponding audio data, and the played audio data is not as frequently changed over as the played video data during a search operation."

3. The closest prior art, Ando et al. (US 2001/0046371 A1) either singularly or in combination fail to anticipate or render the above quoted limitations obvious.

Ando teaches audio information recorded as tracks onto an information storage medium wherein each track has associated management information pertaining not only to the track itself but also to a playback sequence. Also, information indicating break positions of tracks and entry points of reproduction stoppages is recorded as part of information indicating playback sequences. Ando also teaches editing methods of audio information so as to allow program chain information to be changed inclusive of breaks

Art Unit: 2621

or having an original track reproduction sequence while displaying associated still pictures. Ando fails to explicitly teach "an audio-data output section for continuously playing audio data of at least one music piece identified from music pieces recorded in the disk and different from at least some of the music pieces whose video data is played back, upon receipt of the search signal, wherein the played audio data is played back during the playback of video data of a least one music piece for which the played audio data is not recorded on the disk as corresponding audio data, and the played audio data is not as frequently changed over as the played video data during a search operation." or "continuously playing audio data of at least one music piece identified from music pieces recorded in the disk and different from at least some of the music pieces whose video data is played back, upon receipt of the search signal, wherein the played audio data is played back during the playback of video data of at least one music piece for which the played audio data is not recorded on the disk as corresponding audio data, and the played audio data is not as frequently changed over as the played video data during a search operation." As such, Ando either singularly or in combination fails to anticipate or render the above limitations obvious. For comprehensiveness, examiner includes Yamamoto et al. (US 2002/0051625 A1) and Kawabata et al. (US 5,170,159) as pertinent art regarding the dependent claims but do not resolve the deficiencies of Ando as aforementioned.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
